                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This DNA sequence codes for thermostable esterase CL-2-30LC (W23073) CC of Thermococcus CL-2, a marine archaea isolated from a severed CC alvinellid worm, which grows optimally at 88 deg C. It can be CC amplified from a pBluescript vector by PCR (see T79310-11). Claimed, CC (W23069-77, W23088) were recovered from genomic gene libraries. CC (W23069-77, W23088) were recovered from genomic gene libraries. CC They can be used for recombinant production of the enzymes in host CC care stable at high temperature and in organic solvents, making them CC superior for use in production of pure chiral compounds used in CC method is claimed for transferring an amino group from an amino CC acid to an alpha-keto acid using a claimed esterase. The enzymes CC may also be useful as ripening starters in cheese making, in lignin CC synthesis, in fermentable sugar production from lignocellulosic composal in paper and pulp manufacture, in carbohydrate derivative synthesis, in fermentable sugar production from lignocellulosic composals, in the study of plant wall structure, plant resistance to CC disease and organic matter decomposition and to select plants bred CC for production of highly degradable animal feeds.

                                     The present sequence encodes a Zebrafish acidic ribosomal protein PO. The specification describes promoters from cytokeratin gene, the muscle creatine kinase gene, fast skeletal muscle isoform of the myosin light chain 2 gene, and an acidic ribosomal protein gene. The promoters of these genes are muscle- and skin-specific. They are capable of directing a structural gene to be predominantly expressed in skin epithelia when it is inserted in front of the structural gene and introduced into fish embryos. The promoters can be used in recombinant DNA molecules, or chimeric genes and the chimeric genes can be used to create transgenic fish or in a vector used to transform a cell. The transgenic fish can
                        be used in methods for detecting steroid hormones, or heavy metals such
                                                                                                                                                                                                                                                                                                                                                                (/XXDX)

                                                                                                                   The present sequence represents a DNA fragment which is involved in the present invention for isolating a lipase which is highly reactive with a highly unsaturated fatty acid ester. A host transformed by a vector containing the novel DNA can be used in the preparation of the protein having lipase activity. The transformant prepares the lipase efficiently in a large scale.
                                                                                               Sequence 1437
                                                                                                                                                                                                                        Lipase coding sequence - used to prepare a lipase reacting remarkably with a highly unsaturated fatty acid ester
                                                                                                                                                                                                                                                               WPI; 1997-484105/45

```

The present sequence represents a novel DNA fragment which encodes a protein having lipase activity. The lipase, which was isolated from Pseudomonas fluorescens, is highly reactive with a highly unsaturated fatty acid ester. A host transformed by a vector containing the novel DNA can be used in the preparation of the protein having lipase activity. The transformant prepares the lipase efficiently in a large

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
This cDNA sequence codes for a 25 kDa glutathione transferase (GST) subunit (see Y05537), which has been termed Triticum aestivum GST 1 (TaGST1). The cDNA was isolated from an expression library prepared from RNA extracted from 7-day wheat var. Hunter shoots
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Glutathione transferase; GST;
TaGSTl; herbicide resistance;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1534
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1474
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Triticum aestivum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Wheat glutathione transferase

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   broad-ranging activities toward xenobiotic substrates, including herbicides, and also have glutathione peroxidase. The invention provides cDNAs and genomic DNAs (see X25144-52) encoding wheat GST subunits (see Y05537-45) active in herbicide metabolism. This is fundamental to understanding the GST detoxification in wheat and in the development of transgenic herbicide resistant plants expressing wheat GSTs. The invention also provides methods of identifying compounds capable of metabolism by GST, or compounds that induce GST expression in graminaceous plants, and for determining the GST level in a sample of seed or flour.

Transgenic plants, host cells used for production of GST subunits

This glucose isomerase is used to create a mutant with improved heat resistance which comprises replacing an amino acid in a specific position of is sequence. The glucose isomerase is useful for the preparation of

A38389/c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to proteins encoded by the benzothiophene oxidase (bto) gene cluster from Pseudomonas sp. WF505, specifically the protein which controls expression of the gene cluster (Y97827), the controls expression of the gene cluster (Y97827), the controls expression of the gene cluster (Y97827), the controls enzyme (Y97824), which controls benzothiophene activity via redox regulation. These enzymes are respectively encoded by the bto gene cluster open reading frames ORF2-16 (A38396), ORF4-9 (A38396) and ORF6-7 (A38395). The invention also encompasses genetic constructs and vectors comprising the genes encoding these proteins, hosts containing such constructs and the recombinant production of the enzymes. Pseudomonas sp. WF505 benzothiophene oxidase, benzothiophene oxidase co-enzyme and bto gene cluster regulator are useful in the desulfurisation of crude oil and containinated by organic sulphur compounds. Sequences A38390-A38400 crepresent genes of the Pseudomonas sp. WF505 benzothiophene oxidase gene cluster, while sequence A38399 is the entire gene cluster sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to proteins encoded by the benzothiophene oxidase (bto) gene cluster from Pseudomonas sp. WF505, specifically the protein which controls expression of the gene cluster (Y97827), the benzothiophene oxidase (bto) enzyme itself (Y97825) and a benzothiophene coxidase co-enzyme (Y97824), which controls benzothiophene activity via redox regulation. These enzymes are respectively encoded by the bto gene cluster open reading frames of office (A38398), orre-16 (A38395) and orf6-7 (C (A38395). The invention also encompasses genetic constructs and vectors (C comprising the genes encoding these proteins, hosts containing such comprising the genes encoding these proteins, hosts containing such (C constructs and the recombinant production of the enzymes. Pseudomonas sp. WF505 benzothiophene oxidase, benzothiophene oxidase co-enzyme and bto gene cluster regulator are useful in the desulfurisation of crude oil and containinated by organic sulphur compounds. Sequences A38390-A38400 crepresent genes of the Pseudomonas sp. WF505 benzothiophene oxidase gene cluster, while sequence A38399 is the entire gene cluster sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This DNA encodes an enzyme which is capable of catalysing the reaction releasing a methyl group from vanillic acid or syringa acid. The DNA an transformed host cells can be used to produce a recombinant enzyme. This enzyme plays an important role in transforming natural components into those of catechol or pyrogarol structure.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               seeds. The claimed nucleic acids can be used to transform a plant to modulate lignin biosynthesis. A claimed method involves transforming a plant cell with a recombinant expression cassette comprising a lignin biosynthesis polynucleotide operably linked to a promoter, growing the plant cell under plant growing conditions, and inducing expression of the polynucleotide for a time sufficient to modulate (preferably increase) lignin biosynthesis in the plant. The plant lignins can be used as chemical feedstock. Plant material of increased lignin content can be used as a fuel source, and in the pulp and paper industry. Decreased lignin content improves the digestibility of fodder crops.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     nucleic acids (see x25196-216) that code for proteins (see Y05657-77) involved in lignin biosynthesis are claimed. A claimed are recombinant expression cassettes, host cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This DNA sequence encodes a cinnamate-4-hydroxylase (see Y05664) of maize. A polynucleotide having this sequence can be amplified from a cDNA library prepared from immature ear of maize line AP9-using the primer pair given in X25231 and X25232. The invention
                                                                                                                                                     Vigna angularis
                                                                                                                                                                                                                                 Gene encoding a subunit of cellulose synthase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents a gene encoding a subunit of the cellulose synthase complex of Vigna angularis. The invention relates to subunits cellulose synthetic equipment, that can be used to increase the amount cellulose synthesised by a plant. The proteins and genes encoding them can also be used to improve the properties of the cellulose being

The GI is pref. derived from Actinoplanes missouriensis. The substitn. is Lys for Arg. or vice versa. Specific Lys or Arg residues are identified and site-directed mutagenesis of the DNA sequence encoding the GI is performed. The novel mutant gi shows 65 per cent or more sequence homology with the AA sequence of WT A. missouriensis GI. Compared to wt enzyme it shows higher conversion performance and improved thermostability and pH stability. The example concerns the cloning and sequencing of GI from other bacterial strains. Fig 21 displays the AA SQs to
